
EECS 16A Designing Information Devices and Systems I

Discussion 0B

1. Solving Systems of Equations A system of linear equations can either have one solution, an infinite number of solutions, or no solution at all. For the following systems of equations, state whether there is a unique solution, no solution, or an infinite number of solutions.

(a) Determine the values of x and y that satisfy the following system of equations:

$$2x + 3y = 7$$

$$4x - y = 5$$

(b) Determine the values of x and y that satisfy the following system of equations:

$$2x + 5y = 12$$

$$4x + 10y = 8$$

(c) Determine the values of x , y , and z that satisfy the following system of equations:

$$2x + y - z = 3$$

$$4x + 2y - 2z = 6$$

$$3x - y + 2z = 4$$
